- Team → submits → Roster (1 : 1 per tournament – one roster per team per tournament)
- Match → involves → Team (N : 2 – each match is between exactly two teams)
- Organization → has → Finance (1 : N – one organization has many financial records)

3. Data Flow Diagram (DFD)

A Data Flow Diagram (DFD) is a diagram used to represent the flow of data between processes, data stores, and external entities in a system.

DFD LEVEL 0

This diagram represents the Level-0 / Context Data Flow Diagram of the Online Game Organizations Management System.

External Entities:

- Player
- Team Manager
- Tournament Organizer
- Admin

Main Process:

Online Game Organizations Management System — This central process handles organization registration, team management, player profiles, tournament scheduling, match result recording, standings updates, and financial tracking.

Data Flows from Player to System:

- Registration and profile details
- Availability and team acceptance responses
- Dispute submissions for incorrect results

Data Flows from System to Player:

- Match schedule and tournament bracket information
- Personal performance statistics and match history
- Notifications for upcoming matches and results

Data Flows between System and Team Manager:

- Team and roster details submitted for tournaments
- Team performance reports and standings received from system

Data Flows between System and Tournament Organizer:

- Tournament configuration and match schedule submitted to system
- Match results submitted to system for standings update
- Generated brackets and updated leaderboards received from system

Data Flows between System and Admin:

- Platform-wide analytics and reports
- Organization approval or suspension actions
- Dispute resolution decisions
